

Volume II: Issue IV

SPI's 1st Annual Dealer Appreciation Barbeque

We thank the 130 dealers that are using our monitoring services. We also invite all new dealers to come and visit SPI: The central station that caters to all your security needs.

Surveillance Plus Inc would like to invite you to our first ever barbeque. It will take place on September 14, 2006 at 11 am. Ample parking available. We hope you've all had a relaxing and enjoyable summer. Here at SPI, we've been working hard to look up new technology in order to better assist you, the dealer. We have discovered three products: two deluxe professional DVRs, and the Tela Link receiver, that transmits signals over radio. After testing the two DVRs, we feel they are among the leaders of DVR technology. A live feed to our central station is available on our website to show you some of the features of these DVRs. You have to see it to believe it! View the live demo over your internet browser.

One of the most impressive features of the IL DVR is the compression card that displays real time over a web browser. You can log on from anywhere in the world and view your cameras, playback events in **REAL TIME** and record to your computer without needing a client software. Dealers can order their DVR through SPI and also enjoy 24 hour technical support. By doing this, dealers will benefit from a much lower price. A price list is included on the following page as well as on our website.

Key Features of the Deluxe Professional IL DVR:

- *Server and client software available in French or English.*
- *Individual unit accommodates 1 to 64 camera inputs at 30 images per second with synchronous audio inputs.*
- *Real time remote monitoring and playback via internet, support IE browser network client.*
- *Easy to use due to friendly GUI interface.*
- *Hardware support H.264 Compression, 30% more powerful than MPEG-4.*
- *Alarm before recording and alarm message sending.*
- *Digital Map function.*
- *Bi-direction remote call and talk function.*
- *Remote recording and remote administrating.*
- *Software watchdog.*
- *Audio recording per camera.*

Please visit our website to view a complete listing of all the characteristics of the DVR (Available in PDF).

The Geovision DVR distributed by Cyberview Technology Inc. can satisfy virtually any type of application in any sector of the end-user market. It includes the basic 4, 8 or 16 camera video capture cards, PC type DVRs, imbedded standalone DVRs, a low cost external USB DVR card system as well as an excellent choice of quality CCTV cameras that all use Sony CCD imagery chips. Some of the key features that the DVR can offer are intelligent recording and playback, remote surveillance, H264 video compression cards available, 16 channel audio streaming and recording, PTZ control and object tracking, unattended and missing object detection, remote playback and much, much more. Cyberview Technology Inc. also provides in-house and on-site application support and services to its valued CCTV reseller customers.

SPI is proud to announce that we have the Tela link receiver. It can transmit signals over radio frequencies. After testing, we are satisfied that alarm transmissions over radio are a good backup in case of telephone failure at the clients' premises. It can even be used as a stand alone unit, compatible with all alarm panels and transmits all signals. In comparison to other wireless backup systems, the price of the Tela Link module is lower than other products in the market today. The central station monitoring fee is also less than for other wireless products at SPI. To better serve our dealers, SPI will carry this line and have it available to you 24/7. It is available for pickup at our offices. Defective units are also replaced immediately. Take a look at the promotional offer – order now if you want to take advantage of this low price! Full characteristics and coverage areas can be found on our website, along with a complete price list.

Video surveillance is becoming more and more popular today. At SPI we support any DVR that follows the standards. Currently providing video surveillance for over 500 cameras, we do it right, resulting in many success stories. By offering video surveillance 24/7 to your clients, you can profit in the long run.

To reserve a spot for our barbeque, which will include demonstrations of the aforementioned products, please call us at 514-342-0707 or toll free at 1-888-882-0707 before September 13th. If you are unable to attend please call to book a private demonstration at our offices at anytime.

We hope to see you there,

Homer Katsianis
President
